District Education Survey 2025

Summary of findings for the planning committee

This report summarises the results of the annual education survey conducted across twelve districts between January and March 2025. The survey covered primary and secondary schools, with a focus on enrolment, attendance and access to learning materials.[1]

1. Key findings

Enrolment in primary schools increased in nine of the twelve districts. Attendance remained steady overall, although schools in remote areas reported lower attendance during the monsoon months. Access to textbooks improved after the new distribution scheme was introduced.

District	Schools surveyed	Enrolment change	Attendance
Northfield	48	+6.2%	91%
Riverside	35	+3.8%	88%
Hillcrest	27	−1.4%	79%
Lakeview	41	+4.5%	93%

> **Note for the committee:** figures for Hillcrest are provisional because two schools could not be visited before the deadline.

2. Attendance across the year

Attendance was highest in the second quarter and lowest during the monsoon. The chart below shows the average attendance by quarter for all districts combined.

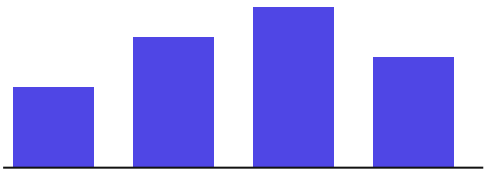

Figure 1: Average attendance by quarter

[1] The survey followed the methodology agreed by the committee in 2023.

3. Learning materials

Most schools now receive textbooks before the start of the academic year. However, teachers in several districts asked for more reading material in local languages, especially for the early grades.[2]

4. Recommendations

The committee should consider the following actions for the next academic year:

- Extend the textbook distribution scheme to all remaining schools.
- Provide reading material in local languages for grades one to three.
- Arrange transport support in districts with low monsoon attendance.

5. Budget summary

Item	Estimated cost (₹ lakh)
Textbook distribution	120
Local-language readers	45
Transport support	60
Total	**225**

[2] Requests were collected through the teacher feedback forms.
